

# Driving the Future of Automotive Product Strategy

## WHY IT WORKS

Innovation waits for no one.

Your customers expect more, faster. Product managers can't afford to wait years to deliver new automotive solutions—they need tools that keep pace.

Gocious helps you prioritize customer needs incrementally—translating Voice of Customer into action.

With powerful Product Portfolio Management technology and dynamic roadmaps that link needs to projects, Gocious guides design and engineering teams in real time—keeping them flexible, aligned, and always moving forward.

# Smarter Planning for a Cyber-Physical Future

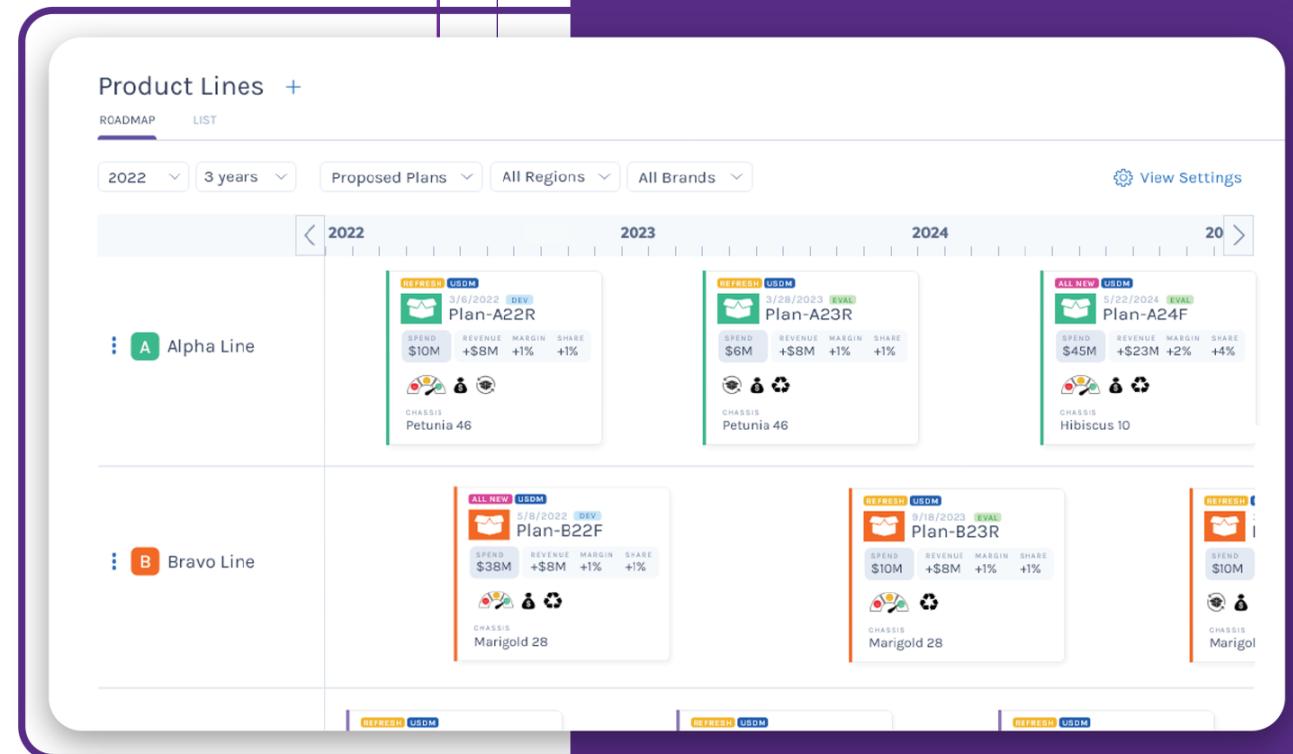

We live in a cyber-physical economy, where transforming complex, platform-based products from physical to digital isn't optional—it's essential for survival.

Gocious makes this transformation seamless.

Our Roadmap Intelligence platform empowers hardware and software teams—working at different speeds—to align, plan interconnected feature launches, and accelerate product evolution. By fostering collaboration, we help automotive teams adapt to market changes with speed and precision.

As systems grow more complex, leading product teams recognize the urgency: interfaces and dependencies must be tracked and updated more frequently than ever. A single software feature must now be compatible with hardware and operating systems.

Gocious powers confident decisions in every phase of product delivery.

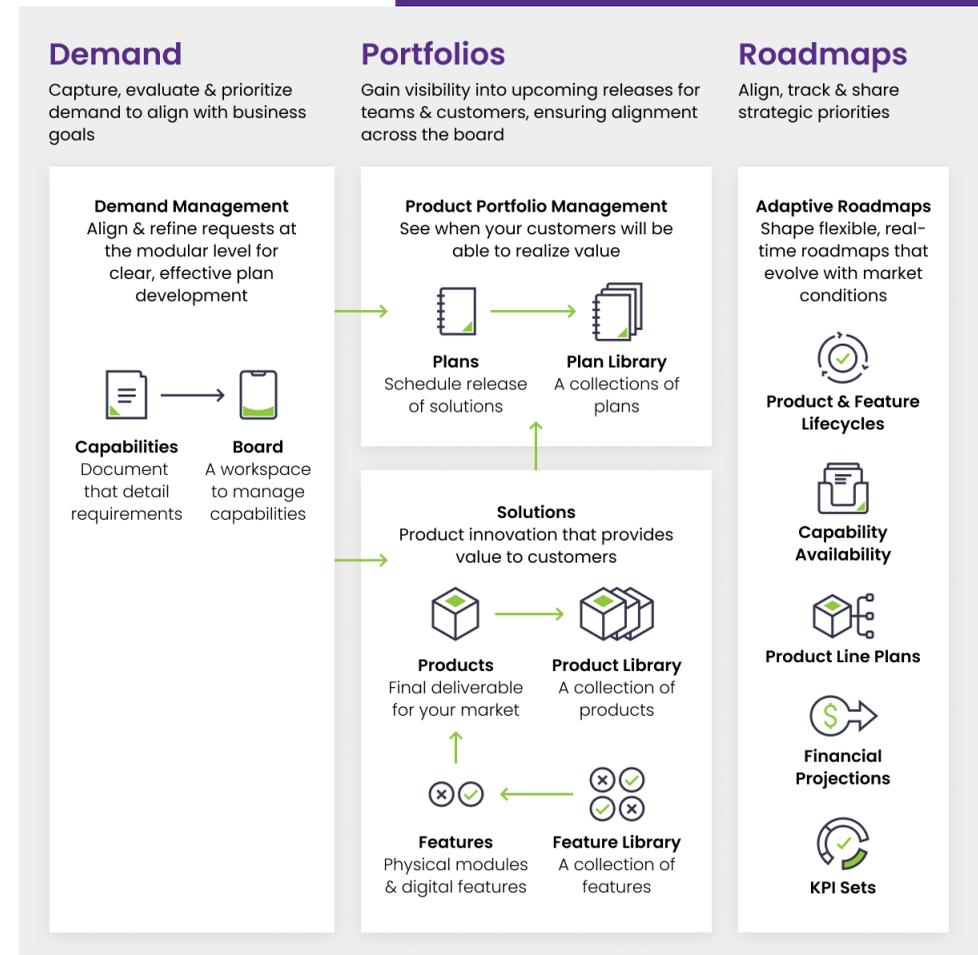

# The Gocious Model

One platform to manage the lifecycles of diverse features—physical, digital, or a blend of both—within a framework built for the complexity of modern vehicles.

BRIDGE THE PHYSICAL-DIGITAL  
DIVIDE WITH REAL-TIME AGILITY

- 1. View Your Entire Product Ecosystem**  
 Gain a comprehensive view of dependencies between hardware and software—including physical features (e.g., engines, transmissions) and digital features (e.g., software updates)—ensuring alignment across development timelines and compatibility.
- 2. Leverage Adaptive Portfolio Planning**  
 Centralize your product data to take a more strategic approach to managing your portfolio—one that emphasizes flexibility, responsiveness, and alignment with shifting business priorities and market conditions.
- 3. Track Digital & Physical Features**  
 Changes to digital features, such as software epics, are synced with their corresponding physical systems—reducing the risk of misalignment.
- 4. Adapt to System Complexity**  
 Cyber-physical products require frequent updates to ensure hardware, software, and operating systems function cohesively. Gocious streamlines dependency management, making it easier to adapt quickly and avoid system fragility.

Bringing it all together

# Gocious for Automotive Manufacturers

- **Platform Standardization & Flexibility**

Define features shared across product lines to ensure consistency—while still enabling customization for specific models or market segments.

- **Support for Divergent Development Cycles**

Synchronize hardware's longer development timelines with software's agile sprints, bridging the gap between traditional and modern workflows.

- **Portfolio Visibility Across Regions**

Gain insight into product performance and development across global regions—ensuring consistency and compliance with local automotive standards.

- **Dependency Tracking for Complex Systems**

Map and monitor dependencies across hardware (e.g., powertrains, chassis) and software (e.g., firmware, connectivity), ensuring seamless integration.

- **Strategic Long-Range Planning**

Plan across multiple model years with timeline-aware roadmaps, scenario planning, and dependency insights. Teams can anticipate future platform needs, align investments, and adapt without sacrificing speed or flexibility.

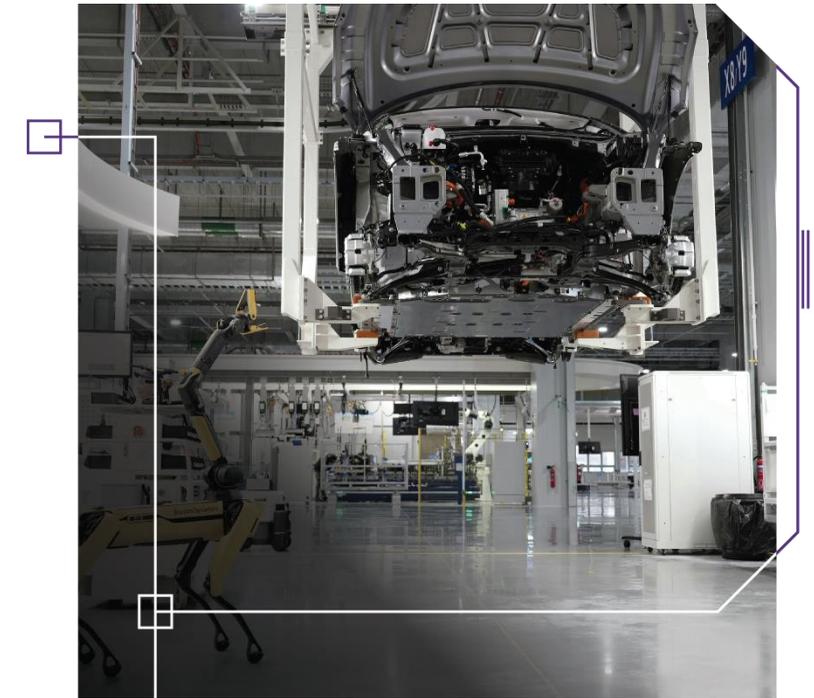

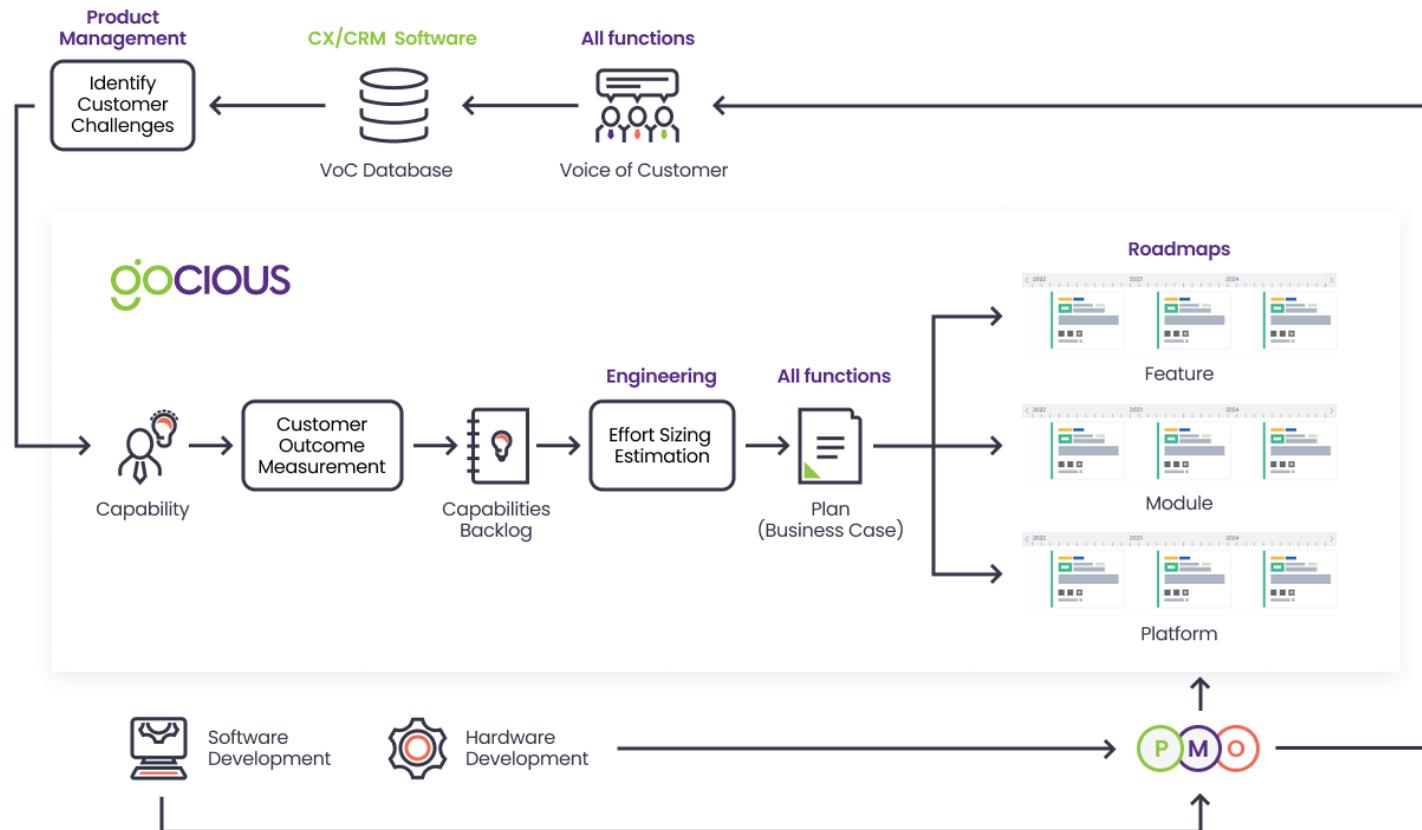

- **Real-Time Change Management**

Track feature availability, regulatory updates, and change requests instantly—keeping engineering, production, and supply chain teams aligned.

NAME	PRIORITY	STAGE	STATUS	SCORE
1041 Longer battery life	↑	In Review	In Dev.	4.5
1062 Brighter screen	↑	Prototyping	In Design	3.5
1048 Faster performance	↑	Analyzing	Idea	3.7
1053 Lighter weight	↓	Analyzing	Idea	3.2

# Customer-centric Innovation for Cyber-Physical Systems

Gocious provides a centralized repository for capturing customer feedback (Voice of Customer) and aligning it with cyber-physical product roadmaps. This ensures that customer needs are prioritized and addressed iteratively.

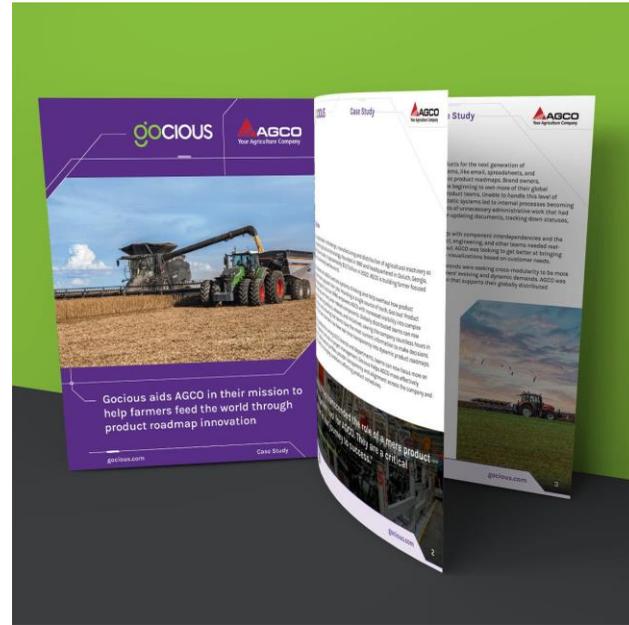

## MODERN DEMAND MANAGEMENT

- Customer needs are quantified and mapped directly to specific product features or updates—enabling faster delivery of value through iterative releases.
- Driver feedback can inform both hardware enhancements (e.g., improved cabins) and software innovations (e.g., upgraded user interfaces).
- Customer satisfaction can be linked to the adoption of cyber-physical systems—demonstrating tangible value from digital transformation.
